Today, as we look back at the history of mankind, we can find things both good and bad. With that in mind, I think future generations will look back at our era and find things that can be both praised and criticized.

First, let's consider things such as health and medicine. Future generations will look back at us and see that great advances were made — organ transplants and decoding the genome to name a few. Of course, we can be criticized on the same theme. Many people on our planet don't yet receive basic health care.

Scientific endeavor is another area where we will get a mixed review. Our era can take credit for advances in robotics and space travel, but we will also have to take responsibility for the environmental damage we have caused.

Lastly, let's consider human rights. Our era can be praised for significant improvements in human rights. Many countries now guarantee equality among all citizens. Most countries, including Japan, still need to improve, but I believe the future is bright for human rights.

Despite our faults, we have much to be proud of. Hopefully, future generations will look back and find much to praise. (198 words)
