It's truly amazing how technology has changed the world we live in. Despite the many advantages, we have to ask ourselves if we have become too dependent on technology. I'm afraid the answer is yes.

Telecommunication devices such as cell phones and the Internet have revolutionized the way people communicate. Unfortunately, these devices create negative side effects. Some people isolate themselves, communicating only with a clique of close friends. They fail to make new friends, or even worse come to avoid face-to-face communication.

Another problem is our hi-tech machines require energy. Of course, burning fossil fuels to create energy causes pollution and global warming. Also, fossil fuels are limited in supply. In Japan's case, dependence on imported oil could be a problem in the future.

What would happen if for some reason we didn't have electricity? Without machines such as computers, many people wouldn't be able to do their jobs. The economy would come to a standstill.

Technology has certainly improved our lives, but if we rely too much on technology, we create certain problems and dangers. We need to be aware of this and try to reduce our dependence on technology. (203 words)
