## 4 番 : 英論文作成

Living in a wealthy country like Japan, we rarely think about how difficult it must be to not have enough food. Nevertheless, tens of thousands of people around the world suffer from hunger on a daily basis. We have a moral obligation to do more to eliminate world hunger.

One of the biggest reasons for hunger is poverty. If measures are taken to improve the economies of the poorest countries, we can reduce world hunger. I can think of two ways to do this. One would be to share technology so that poor countries can benefit from the technology. The other thing to do is to embrace free trade. When the wealthy and powerful countries create barriers to imports, they often are hurting the poorest countries.

Another way to reduce hunger is to use agricultural technology to its fullest — including the use of genetically modified crops. For example, there are now crops that were designed to be drought-resistant. These kinds of crops will be especially important since it appears that climate change will disrupt agricultural output.

Reducing world hunger is possible and it's the right thing to do. More needs to be done to eliminate world hunger. Every little bit counts.
